## USER GUIDE

### Overview

The Image Downloader Tool v1.0 is a simple and secure Windows batch utility designed to download images from a list of URLs. It supports automatic folder creation, detects common image formats, skips invalid links, and shows download progress.

### Features

Auto-creates downloads folder

Detects file extensions (.jpg, .png, .jpeg, etc.)

Skips bad links (i.e., those without valid image extensions)

Shows live download progress

### Requirements

A Windows computer

A working internet connection

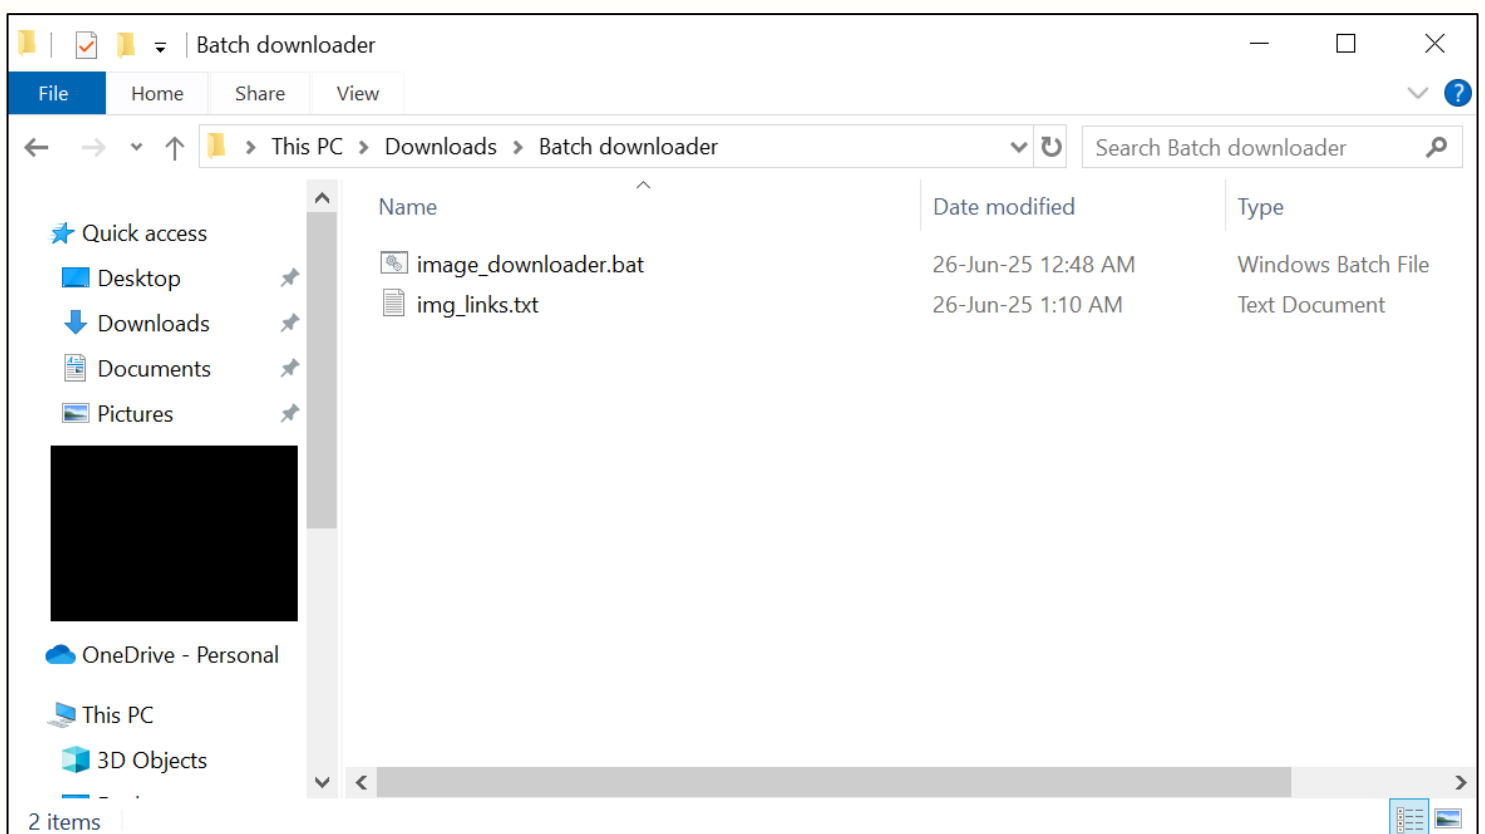

A Notepad software (.txt extension only)

**cURL** must be available (usually comes pre-installed on Windows 10+)

# SETTING UP

1. Make a new folder and name it something like **Batch Downloader**.
2. Open Notepad, Enter your image links **(One Image Link Per line)** and save it as **img\_links.txt** inside that folder.
3. Download the **image\_downloader.bat** file from the GitHub page and put it in **the same folder**.
4. **Double-click** the .bat file to start downloading the images automatically..

Your folder should look like this:

## Notes & Tips

1. Only include image links that end in common extensions like .jpg, .jpeg, .png, or .gif.
2. The tool will skip links without a valid extension.
3. File names will be saved as image1.jpg, image2.png, etc.
4. If a download fails, an error message will appear, but the script will continue.

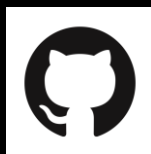

### Disclaimer

- Use only trusted image links — the tool does not scan for viruses.
- Links must end with .jpg, .png, etc., or they will be skipped.
- Broken or invalid links will fail to download
- Downloading from HTTP is not secure..
- You are responsible for the links and content you download.
- The creator (KRITHIK S) is not liable for any damage or misuse.
- Made for educational and personal use only.
